

CD Burner

Create a new file (**File>New**) of **1280x1024 px** and **72 dpi**, which must be painted in **#F9C559** color with the **Paint Bucket Tool (G)**.

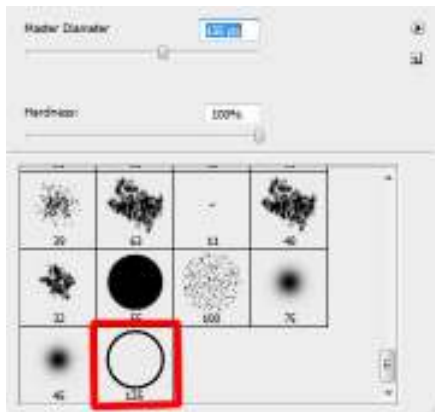

Next we will create another file of **140x140 px** and **500 dpi** on which we will draw a black ring, applying the **Ellipse Tool (U)**. Firstly try to make the outside borders of the ring and after that cut out its middle part, pressing on **Alt** button.

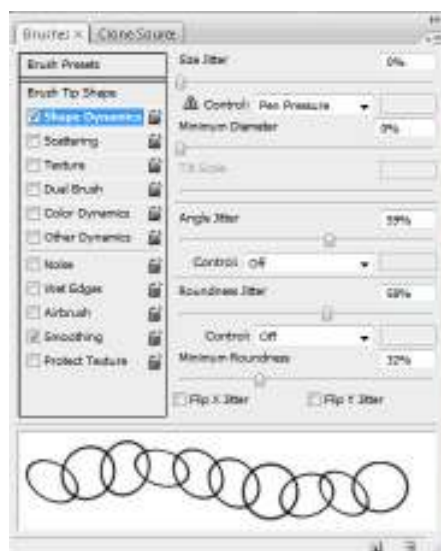

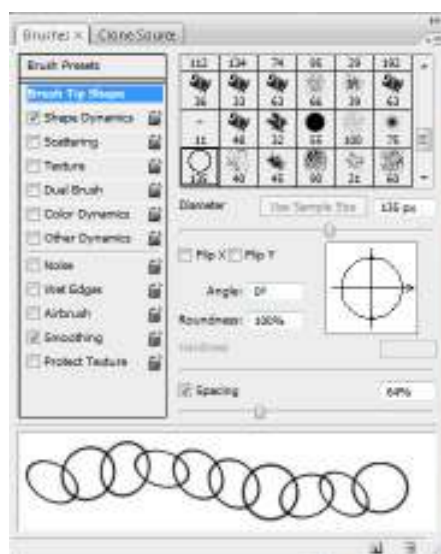

Save this brush: **Edit>Define Brush Preset**.

Create a new layer, using on it the brush made earlier (the brush may be found in the end, in the standard set).

Set the parameters for this brush. **Press** the option in the **Brushes** submenu on the right side.

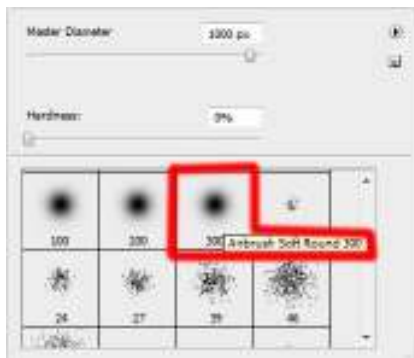

Represent the background of the picture to be, applying the brush with the chosen earlier parameters. Its color is **#CC9040**

Set the next indicated parameters by making a click on this layer on the layers panel: **Fill 40%**
Blending mode-Linear Dodge

On the next new layer (**Create new layer**) we will choose again the **Brush Tool (B)** to draw a diagonal line, which color is **#821F06**

Insert now on the picture your CD (I will use CD template created by [Inonomas](#)).

The disk 层 layer has the parameters shown below: **Blending Options>Outer Glow**

Using the standard brush, try to dark out the background situated lower than the CD itself. The color is **#1E0C04**. This layer should be placed lower than the layer containing the disk.

The layer 属性 parameters: **Fill 60%**
Blending mode-Darker Color

Create a new layer on which we will use the **Paint Bucket Tool (G)** to fill the new layer with black color. Choose after that this filter 属性 option: **Filter>Noise>Add noise**. This layer must be also placed lower than the CD 属性 layer:

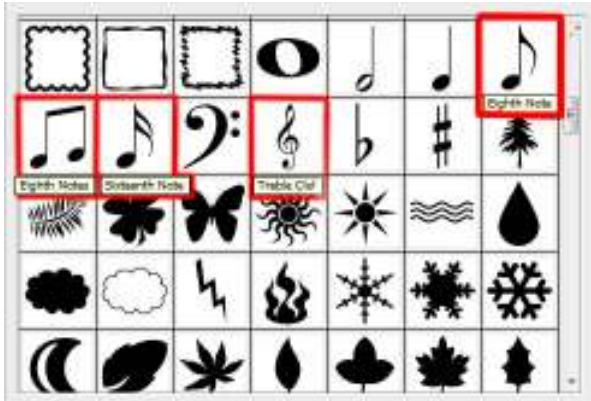

The layer mask parameters: **Fill 20%**
Blending mode-Soft light

Next we will represent a lot of musical notes, using for this operation the **Custom Shape Tool (U)** and the color **#FEFF6F**

Turn around the notes, using the **Free Transform** selection. Place also these notes layers lower than the layer containing the CD.

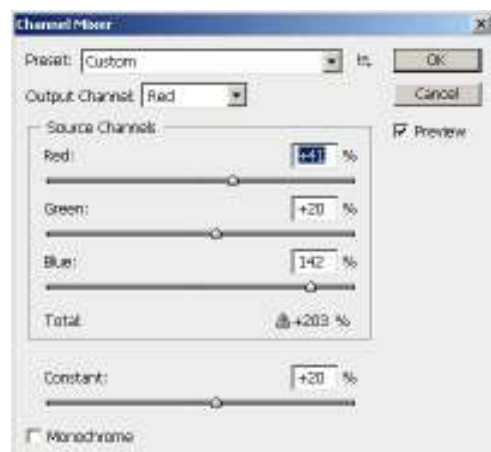

Next we must Merge down all the layers containing the musical notes into a single one. In this case we have to press **Ctrl** button for marking the necessary layers and after that press **Ctrl+E**. For the last obtained layer we have to choose the next demonstrated parameters: **Opacity 81%, Blending mode- Overlay**

Make a copy of the last made layer:

Mark out the layer containing the CD and make a click on the next options, situated on the bottom part of the layers panel: **Create new fill or adjustment layer>Channel Mixer**

Press **Alt** button and make a mouse click between the **Channel Mixer** layers and the layer containing the CD (on the layers•panel).

The final result!
